

Executive Summary — Sales & Customer Performance Intelligence Suite

This analysis reviews customer, product, and workforce performance to identify revenue concentration, operational pressure points, and areas with growth potential.

Customer & Revenue Overview

- The business is highly dependent on the U.S. market, which represents 60.91% of customers and 66.65% of total revenue.
- California is the leading state, contributing 12.64% of revenue from 11.13% of customers, suggesting above-average customer value.
- Revenue is also concentrated by segment: A-segment customers account for only 26.95% of the base but generate nearly 80% of revenue, while C-segment customers make up 51.67% of customers and contribute only about 5%.
- After California, Texas (8.91%) and Washington (8.18%) are the next most important states by revenue.

Sales & Product Performance

- Bikes dominate the portfolio with 81.59% of total revenue, while Components contribute 15.30% and offer room for category expansion.
- Profitability follows a clear Pareto pattern: about 13.5% of SKUs generate nearly 80% of total gross profit.
- Product groups such as Touring Bikes and Frames sit in the middle tier and may support further growth through bundling or cross-selling.
- At the same time, nearly 60% of SKUs belong to the long tail and contribute limited revenue while adding operational complexity.

Product Deep Dive

- Sales follow a seasonal pattern, with performance building through mid-year and reaching a peak in August.
- Momentum weakens toward year-end, with an overall decline of about 13%, while January is the weakest month.

Workforce Overview

- The workforce is concentrated in Manufacturing, which accounts for 63.8% of employees.
- R&D has the highest hourly rate at \$35.93, followed by Executive positions at \$27 per hour.
- Quality Assurance (59.7 hours) and Inventory Management (54.4 hours) show the highest average sick-leave hours, which may affect operations if sustained.
- Executive employees have the highest average sick-leave cost at \$1,443.40 per employee.

Strategic Risks & Opportunities

- The business performs strongly, but revenue dependence on the U.S., A-segment customers, and Bikes creates concentration risk.
- Growth opportunities appear in Components, B-segment customers, and possible simplification of low-impact SKUs.

Recommended Actions

- Protect and retain high-value A-segment customers.
- Expand the Components category through targeted offers and bundling.
- Review low-performing long-tail SKUs for simplification.
- Monitor absenteeism in QA and Inventory Management.

Executive Takeaway

- The business is performing well, but too much of that performance still depends on a limited set of customers, products, and markets.
